## Mirena Insertion – Dr Pilla

After discussion with your GP regarding the Mirena as a suitable contraception choice, there will be three surgery visits associated with the Mirena insertion.

### First Visit

The first visit will involve a Pap smear and vaginal swab. Your GP will then issue you with a script for the Mirena device and answer any further questions you may have about the procedure. We shall wait approximately 1 week before your next appointment so as to determine if any treatment is required as a result of the Pap smear and swab.

### Second Visit

The second visit includes the insertion of the Mirena. You should factor in a visit time of approximately 20 minutes (*please let reception know you require this length of time when booking the appointment*). You will need to be observed for a short while post insertion.

### Final Visit

The Final visit will be approximately 6 to 8 weeks post insertion to review how the Mirena is suiting you.
